

**MNG LABORATORIES**

A LabCorp Company

June 16, 2020

Dear Valued Client:

Effective July 27, 2020, the MNG amino acid assays, test codes MET01, MET02, and MET03 will be performed by our parent company, LabCorp, in its Burlington, NC laboratory.

This change in testing location will not affect your ordering and billing process.

- MNG's clients should continue to order amino acid testing through MNG using test codes MET01, MET02, and MET03 as appropriate. Samples will then be forwarded to Burlington, NC for analysis.
- Your amino acid pricing and billing process will not change and you will continue to receive an invoice from MNG.

Test methodology for each amino acid assay will change from high performance liquid chromatography (HPLC) to liquid chromatography/tandem mass spectrometry (LC/MS-MS) and a LabCorp report will be generated. A sample report is attached for your reference.

Due to the change in performing location for MNG amino acid assays, STAT services for these assays will no longer be available.

For additional information, please contact MNG Laboratories' client services at 844-664-8378 (844-MNG-TEST). We appreciate your continued business and look forward to serving you and your patients.
